

# AI questionnaire report – Humber region

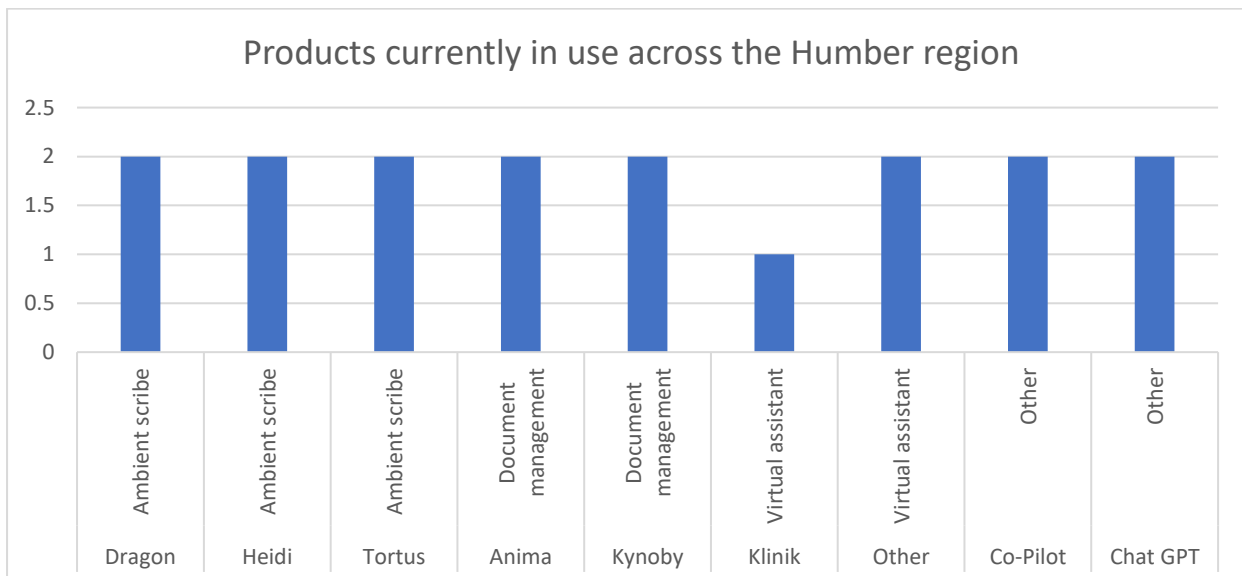

Our AI questionnaire was distributed 3 times among the Humber region GPs.

The results below are based on the 35 responses that we received by 13th March 2025.

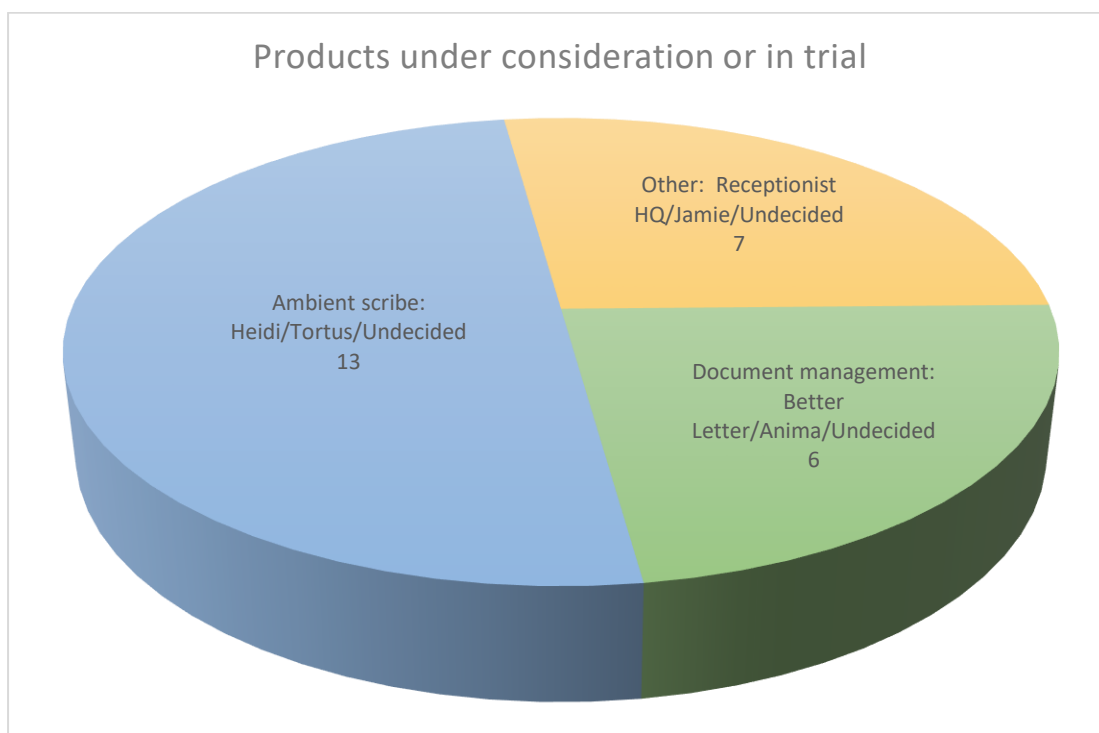

We tried to broadly categorise the potential uses of AI to encourage wider consideration of purpose beyond our most common local conversation of ambient scribes and document management.

The graph below shows a breakdown of the products already in use in practices.

The pie chart shows which products/uses for AI are being considered. Some respondents expressed an interest for further AI products if they were to be funded by the ICB.

N3i will continue to support the safe onboarding of AI products through the use of DPIAs and risk assessments.

We would like to reaffirm that when we approve a DPIA, it is not the product that we are approving, it is the practice's *use* of the product. There are many AI products that can be used both securely and insecurely, and it is the DPIA that will ensure the practice have evaluated how they will use it securely.

We would also highlight the importance of the use of SOPs to ensure that all members of staff use the product the same - this is especially important for those products that can be easily downloaded onto mobile devices and can be used without management oversight.
